

Young Air Conditioning of Malvern was successfully chosen to install a stylish Daikin Emura air conditioning system into a beautiful Eco house situated on the edge of the Malvern Hills.

The initial brief was to cool the master bedroom of this incredibly well insulated Passivhaus designed property. Given that the interior of the property was decorated in a very modern and elegant manor the ideal solution was a unit from Daikin's Emura range. The customer selected the Emura in silver to compliment the bedroom interior.

The Daikin Emura range is available in four different capacities from 2.0 kW through to 5.0kW. The Emura range benefits from impressive seasonal efficiency values up to A+++ in cooling and A++ in heating mode. The Indoor units can be finished in either Matt Crystal White or Silver. The curved molded sides of the internal unit help it to blend onto the wall making it less intrusive in the room, especially in residential applications.

Daikin have developed their 3D air-flow system which they describe as being able "to ensure a harmonised temperature throughout the room, the Daikin Emura's 3D air-flow system combines vertical and horizontal auto-swing creating an even distribution of air throughout the room to the corners of even large spaces."

Daikin Emura Features include:

- Auto restart after a power failure
- Infrared remote controllers – 7-day schedule timer
- Wi-Fi adaptor\* included as standard
- Night set mode with Whisper quiet operation
- Superior purification and deodorisation of the air inside the room
