The Daikin air purifier model MC707BFVM has been approved by two reputed testing institutions for specifically restricting or removing high levels of named allergens from the environment of allergy sufferers.

(Approval 1) British Allergy Foundation

The British Allergy Foundation (BAF) has granted the Daikin Air Purifier MC707VM its Seal of Approval for reduction in exposure to the following allergens;

- house dust mite;
- cat allergen;
- mould;
- tobacco smoke;
- pollen; and
- formaldehyde.

(Approval 2) TÜV Nord

The TÜV Nord Testing Laboratory for Indoor Air Hygiene examined the ability of the Daikin air purifier to remove airborne fine particulates, paying special attention to allergenic indoor substances.

The examination proved the high efficiency level of the MC707VM.

Flash Streamer Technology

The MC707VM is the result of many years of investment in innovation.

The advanced 7-layer filtering system, along with Daikin's innovative Flash Streamer technology are just two key factors that contribute to the enhanced performance of the air purifier.

Flash Streamer decomposes chemical substances such as odours and formaldehyde into harmless byproducts. Flash Streamer also promotes a photocatalytic reaction on the surface of the Titanium Apatite Photocatalytic Filter that decomposes bacteria and viruses.

The unit is ultra-quiet, making it suitable for use in bedrooms; portable, so can easily be moved from room to room; low in maintenance; and easy to clean. Its compact, stylish design makes it ideal for a range of interior locations such as homes, hotels, offices and restaurants.
